TITLE OF INVENTION: Site-specific Antibody-mediated Activation of Proapoptotic Cytokir
TITLE OF INVENTION: AMAIZE (Antibody-mediated Apoptosis Inducing Cytokines)
FILE REFERENCE: 1708.002US1
CURRENT APPLICATION NUMBER: US/10/389,223A
CURRENT FILING DATE: 2003-03-14
NUMBER OF SEQ ID NOS: 12
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 4.
                                                                                                                                                                                                                                                                                                          FEATURE:
OTHER INFORMATION: Description of sequence 4: synthetic amino acid sequence of an OTHER INFORMATION: anti-body-cytokine AMAIZe fusion protein of the invention exemplif OTHER INFORMATION: TRAIL-AMAIZE (OS4)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 11, No Sequence 2, March 20, March 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 14, Application US/09628665

Patent NO. 6673771

GENERAL INFORMATION:
APPLICANT: Greene, Mark I.
APPLICANT: Murali, Ramachandran
APPLICANT: Minosaki, Masahiko
TILE OF INVENTION: Methods of Inhibiting Osteoclast Activity
FILE PEREBUCE: UPN3831
CURRENT APPLICATION NUMBER: US/09/628,665
CURRENT PILING DATE: 2000-07-28
PRIOR FILING DATE: 1999-07-28

Sequence 189, Application US/09198452A

Batent No. 6559294

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering Reference: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT PILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

SEQ ID NO 189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Patent No. 6673771

GENERAL INFORMATION:

APPLICANT: Greene, Mark I.

APPLICANT: Kinosaki, Masahiko

TITLE OF INVENTION: Methods of Inhibiting Osteoclast Activity

FILE REFERENCE: UPN3831

CURRENT APPLICATION NUMBER: US/09/628,665

CURRENT FILING DATE: 1099-07-28

NUMBER OF SEQ ID NOS: 34

SOFTWARE: PatentIN Ver: 2.1

SEQ ID NO 31

Sequence 27194, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANS

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-13

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409
